# Development of IWRM Performance Indicators for African Transboundary Basins management

EU - China

Istanbul, March 18, 2009

# The project

- 4 project partners:
- **INBO**
- **ANBO Technical Secretariat OMVS**
- **□ IOWater**
- **ECOLOGIC**

# 2 project sponsors:

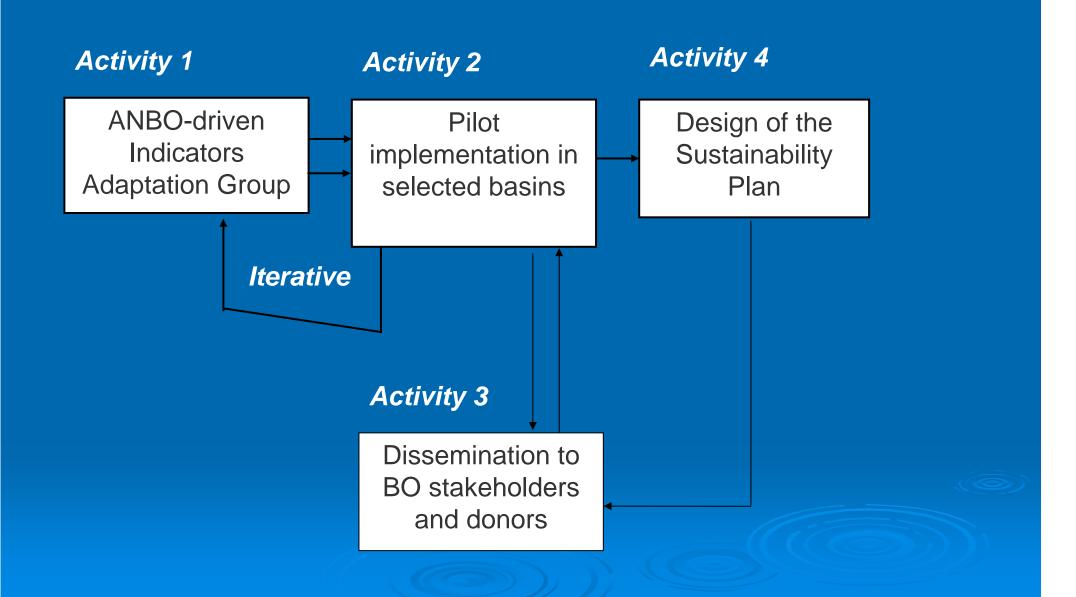

- European Commission
- French Co-operation

# Objectives of the project

Developping and testing in the field Key Performance Indicators, adapted to design and monitor the implementation of Integrated Water Resources Management (IWRM) within African Transboundary Basins.

Experience will be transferable to main national basins around the world.

# Main activities

Today, performance indicators are used on a regular basis, for example for governance of water and sanitation services.

During last years, some experiences were developped for using indicators at Basin Organisations levels for proposing monitoring criteria on IWRM

## But what are good performance indicators ?

Tools for assessment, forecasting, and assistance in decision-making

Defined in compliance with pre-defined objectives

Quantitative data that allow to characterise and evolutive situation

Complemented by qualitative information and comments

# Indicators for whom?

- KPI project aims to develop an appropriate method for developing a common understanding based on Key Performance Indicators (KPI) to build the capacity of basin organizations, helping among other:
- Basin Committees to define appropriate objectives;
- BO management to design (River or Lake) Basin Management Plans and the associated Programmes of Measures by providing benchmarking;
- Public participation to be active, by highlighting what is expected in terms of involvement;
- BO stakeholders to monitor the BMP / PoM process;
- Donors to assess the quality of work and the use of their funds.

# Indicators? On What?

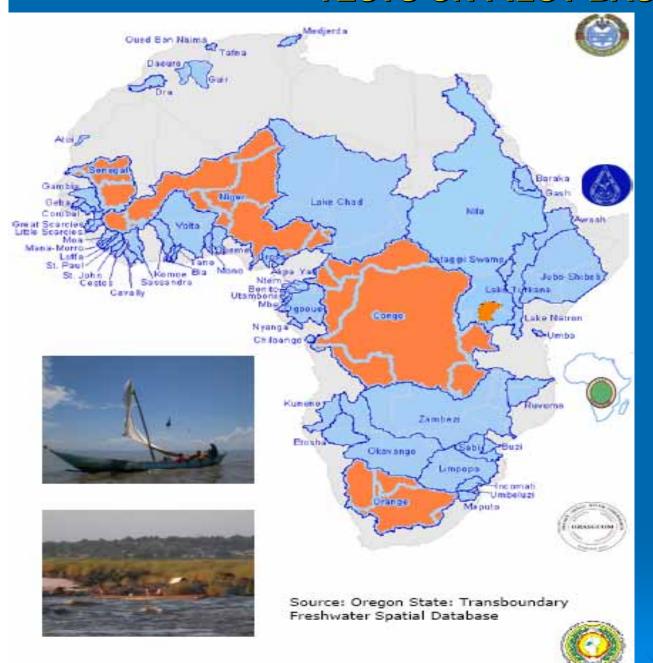

Some performance indicators related to Institutional aspects:

Governance, legal and institutional framework, organisation and missions of a basin organisation

Some performance indicators related to results of policies and actions:

technical, socio-economics, environmental ....

## **TESTS ON PILOT BASINS**

Senegal (OMVS),

Niger (ABN),

Congo (CICOS),

Orange-Senqu (ORASECOM),

Lake Victoria (LVBC).

# INSTITUTIONNAL 1.2 IWRM Performance Indicators for Transboundary River Basin Organizations [RBOs] SCORE CARD

ID#	Indicator	GLOSSARY - Meaning of each Indicator	What is the evidence of this indicator? [A]	How effective has It been? [B]	Indicator value [A X B] = SCORE/15	INDEX SCORE	Source of evidence - tick as many as apply									
			I = WEAK , S= NELTFAL S= STRONG	1_WEAK , 2_ MEUTRAL 5_ STRONG		SCORES SHOWN AS % OF MAXIMUM STRENGTH	PROJECT REPORT	MINUTES OF MEETING	LAW	FINANCAL ACCOUNT	CUIDELINE	PERSONAL OBSERVATION	PLANNING DOCUMENTS	OUALITY ASSURANCE PLAN	REPORTING MECHANISM	OTHER
PLAN	NING INDICATORS															
	Clear planning processes	There is a planning process with well-defined objectives, mutually beneficial goals and development priorities, all stated in a long-term integrated river basin management plan	0	0	0											
2	Recognition of development constraints	Development options in basin management plans recognize resource development constraints	0	0	0											
3	Plan implementation and completion	There is evidence that basin management plans are completed	0	0	0											
COOF	PLANNING INDEX: 0  COORDINATION INDICATORS															
4	International coordination of water management	Basin management programmes use coordination mechanisms between riparians to maximise the opportunity to share benefits of water use	0	0	0											
5	Existence of overarching reporting mechanism	An overarching body coordinates actions and reports to each riperian's high-level administrators	0	0	0											
6	Consensus-based decision-making	Water sharing uses a consensus approach to broker agreements on a basin basis	0	0	0											
7	Transparent monitoring	Each riparian's* water sharing procedures use transparent monitoring mechanisms to account for activities	0	0	0											
8	Coordination with local action	Transboundary basin management plans coordinate with the actions of small-scale local water institutions in each riparian e.g. local water management plans	0	0	0											
9	A range of coordination tools are used	Dialogues, memoranda of understanding, or joint programs of action are used to manage water between countries	0	0	0											
10	Business plan uses coordination mechanisms	The river basin organization uses business plans which specify coordination mechanisms between riparians	0	0	0											
				COORE	DINATION INDEX:	0										

#### FUNDING INDICATORS

	ING INDICATORS										
11	Ongoing funding for basin management	Financing for river basin management exists and is ongoing despite changes in the administration of each riparian	0	0	0						
	Sufficient funding for basin management	Funding for river basin management is adequate to address at least priority natural resources management issues	0	0	0						
13	Investment guidelines	Funding for river basin management operates within international investment guidelines which prescribe cutcomes in transparency, accountability, benefit shares & sustainability (poverty reduction, economic development & environmental flows)	0	0	0						
14	Investment accountability	There are explicit procedures in place which ensure transparent reporting of the results of investing in basin management programs	0	0	0						
15	Donor coordination	Coordination between donor organizations exists to ensure programs and projects are linked, do not duplicate action an address common goals	0	0	0						
					FUNDING INDEX:	0	<u> </u>				
REPR	ESENTATION INDICATORS										
16	Clear roles and responsibilities of riparians	There is clear specification of the roles and responsibilities of the stakeholders in each riparian in the institutional arrangements for basin management	0	0	0						
17	Total membership	All riparians are members of the river basin organization	0	0	0						
	Membership specified in basin organization	There are procedures in place which specify membership and representation in the river basin organization	0	0	0						
19	Water user participation in decision making	There are mechanisms in place whereby water users can participate in the decisions of river basin organizations	0	0	0						
	GEMENT STYLE INDICATORS			REPRESE	NTATION INDEX:	0	·				
	Strong leadership in basin	There is strong leadership in the river basin	0	0	0			$\Box$	Ι		
	orgenization	organization and the leadership works to continuously upgrade the capacity of the RBO's staff									
	Realistic management	The roles, responsibilities and functions of the river basin organization reflect current realities rather than generic principles	0	0	0						
22	Effective communication processes	There is an emphasis on communication, coordination and cooperation between stakeholders within the RBO to deliver outcomes	0	0	0						
23	Priority setting	There is an emphasis on doing what is achievable first in the river basin organization	0	0	0						
				MANAGEMEI	NT STYLE INDEX:	0					

#### LEGAL INDICATORS 24 River basin organization legislation Legislation specifies the functions, structure, 0 financial base & accountability mechanisms for the river basin organization This legislation not only exists but is practised 25 Use of legislation 0 LEGAL INDEX: INFORMATION INDICATORS 26 Information management protocols There is a process to specify the type of information 0 needed, how it is presented and the timing of information exchange in the Information Management System of the RBO Information is integrated on a spatial platform; a 27 Integrated information 0 0 resource management atlas in a GIS provides basin management wide and sub-basin environmental characteristics, problems and best management options 28 Quality control in information The information management system is of uniform 0 management quality across the entire basin and accessible to all stakeholders 29 Modelling and information The river basin organization uses information 0 management systems and models to analyze and management system used for prioritising best management prioritize resource management options options INFORMATION INDEX: 0 ADAPTIVE LEARNING INDICATORS 30 Research outcomes specification The outcomes of technical projects are specified at sub-basin levels as best management options and are stored in an open-access (user-friendly) geographic information system Stakeholders are used in technical studies to help 31 Stakeholder participation in 0 0 research set research goals and interpret results There are procedures in place to learn from local 32 Adaptive-collaborative learning 0 experiences of using technical studies and apply

ADAPTIVE LEARNING INDEX:

them elsewhere in the basin

<sup>\*</sup> A riparian is a member country of a transboundary river basin organization

Problem	General objective / specific objectives	Indicator	Source	Type	Comments	Unit	Sour
	A.1. Increase the safety of the water	Hidicator	Source	Type	V1: All large dams	%	
A. Risk of excessive exploitation of water resources	supply to users; reduce leakage and bad usage through fixing efficiency objectives in each sector of use	Regulated volume compared to input flows	NBA proposition	E	V2: Shared large dams only	%	
	Assure water requirements for hydroelectricity	Water efficiency index for hydroelectricity	New				X p.89
	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	Efficiency of irrigation water usage	Plan Bleu (57)	R	E1 : physical efficiency of transport and distribution networks	%	X p.89
				R		%	X p.84
	Assure water requirements for irrigation	Proportion of agricultural land irrigated	Plan Bleu (52)	Р	***************************************	%	X p.85
		Demand for agricultural water per irrigated hectare	Plan Bleu (53)	Р		m3/year/ha	
		Density of operational water holes for animal farming	WRCU	s		No./km2	
		Efficiency of DWS	Plan Bleu (90)	R	ana	%	X 132
	Assure water requirements for fishing	Fishing production by main groups of species	Plan Bleu (60)	s	000000	T/year	Х р. 93
	Assure water requirements for navigation	main groups or species					1
	A.2. Save water	Water use efficiency	Plan Bleu (90 drinking water)	R	Proportion of distributed water paid by users	%	X p.132
B. Risk of deterioration of							-
water resources	B.1 Reduce pollution	General water quality index	Plan Bleu (87)	s	***************************************	mg/l	X p. 125
		Industrial waste in water	Plan Bleu (63)	Р	***************************************	T/day	X p.97
	Reduce pollution of industrial origin (mines	Intensive use of mineral raw materials	Plan Bleu (64)	s		T/USD	X p.98
	and industries)	Proportion of industrial wastewater treated on site	Plan Bleu (91)	R		%	X p.133
	Reduce pollution of agricultural origin	Use of fertiliser per hectare of agricultural land	Plan Bleu (51)	Р		kg/ha	Х р.82
	neduce policion of agricultar origin	Use of pesticide per hectare of agricultural land	Plan Bleu (50)	Р		Kg/1000 ha	X p.81
C. Risk of deterioration in populations' living conditions	C.1. Improve sanitation						
	From now to 2015 reduce by half the urban population of the river basin without access to sanitation (public, semi-public, private)	Coverage rate of river basin's urban population with access to basic sanitation	MDG/ ECPWAS	s		%	
	From now to 2015, reduce by half the rural population of the river basin without access to sanitation (semi-public, private)	Coverage rate of river basin's rural population with access to basic sanitation	MDG/ ECPWAS	s		%	
		Proportion of wastewater collected and processed by public sanitation systems in urban environments	Plan Bleu (adapted) (88)	R	enementari (manamana)	%	X p.128
		Proportion of wastewater collected and processed by private or semi-public sanitation systems in rural environments	Plan Bleu (adapted) (88)	R		%	X p. 128
	C.2 Improve drinking water supply for river basin residents						
	From now to 2015, reduce by half the urban population of the river basin that is deprived of regular access to drinking water	Proportion of the urban population with sustainable access to an improved water source	MDG/ ECOWAS	s		%	
	From now to 2015, reduce by half the rural population of the catchment area that is deprived of regular access to drinking water	Proportion of the rural population with sustainable access to an improved water source	MDG/ ECOWAS	s		%	

	C.3. Anticipate natural risks					
		Number of sites at risk (flooding)	Plan Bleu (adapted) (118)	Р	No.	X p.170
	Anticipate flooding risk (uncontrolled)	Economic impact of flooding	Plan Bleu (restriction) (119)	Р	%	X p.171
		Existence of intervention plans (flood risk)	Plan Bleu (121)	R	Yes/no	X p. 173
	Anticipate risk of river bank deterioration	Number of sectors at high risk (deterioration of banks)	Plan Bleu (adapted) (118)	Р	No.	
	C.4. Anticipate risks of conflict					
	Conflicts of economic interest					
	Human conflicts (farmers)	Density of passageways to river for livestock using watercourse line	WRCU	s	No./linear km	
	D.1 Protection of renewable resources	Index of use of renewable resources	Plan Bleu (84)	P	%	X p.121
D. Risk of deterioration of the environment	D.2 Protection of underground water resources	Index of non-sustainable water production	Plan Bleu (85)	Р	%	X p.122
	D.3 Protection of wetlands	Surface area of wetlands	Plan Bleu (95)	S	Km2	X p.139
	D.4 Protection of species and aquatic environments	Minimum discharge level on specific node of the basin	NBA	R	m3/s

#### Technical 2.2 Feedback on indicators

Working document: towards the optimal use of indicators across Africa

				Indicator a	ssessment		Calculation period		
Indicator	Code	Indicator use	Pertinence	Simplicity	Reproducib ility	Profitability	•		
Volume adjusted according to hydric potential	A.1.1	Rationalise water demand	Pertinence	Simplicity	iiity	Promability	Annual		
Water efficiency index for hydroelectricity	A.1.2	Rationalise water demand					Annual		
Efficiency of irrigation water	A.1.3	Significantly increase the added agricultural value per metre cube of water used					Annual		
Proportion of agricultural land irrigated	A.1.4	Rationalise water demand					Annual		
Demand for agricultural water per irrigated hectare	A.1.5	Rationalise water demand					Annual		
Density of operational water holes for animal farming	A.1.6						Annual		
Efficiency of DWS	A.1.7	Rationalise water demand					Annual		
Fish production by main groups	A.1.8						Annual		
of species									
Water use efficiency	A.2.1	Rationalise water demand					Annual		
General water quality index Industrial waste in water	B.1.1 B.1.2			<del> </del>			Annual Annual		
Intensive use of mineral raw				<del> </del>					
materials	B.1.3						Annual		
Proportion of industrial wastewater treated on site	B.1.4						Annual		
Use of fertilizer per hectare of	B.1.5						Annual		
agricultural land Use of pesticide per hectare of	B.1.6						Annual		
agricultural land	B.1.6						Arinuai		
Coverage rate of river basin's urban population with access to basic sanitation	C.1.1	Pursue the aim of reaching the Millennium Development Goals					Annual		
Coverage rate of river basin's rural population with access to basic sanitation	C.1.2	(MDG) for access to drinking water and sanitation					Annual		
Proportion of wastewater collected and processed by public sanitation systems in urban environments	C.1.3						Annual		
Proportion of wastewater collected and processed by private or semi-public sanitation systems in rural environments	C.1.4						Annual		
Proportion of the urban population with sunstainable access to an improved water source	C.2.1	Pursue the aim of reaching the Millennium Development Goals (MDG) for access to drinking water and sanitation					Annual		
Proportion of the rural population with sustainable access to an improved water source	C.2.2						Annual		
Number of sites at high risk	C.3.1						Annual		
(flooding) Economic impact of flooding	C.3.2			<del> </del>	<del> </del>	<del>                                     </del>	Annual		
Existence of intervention plans	C.3.2			1			Annual		
(flood risk) Number of sites at high risk	C.3.4						Annual		
(deterioration of banks) No. of passageways to river by	C.4.1			<del> </del>			Annual		
riverbank line Index of use of renewable									
resources	D.1.1						Annual		
Index of non-sustainable water production	D.2.1						Annual		
Surface area of wetlands	D.3.1						Annual		
Respect of instream flow	D.4.1			I.	I.		Annual		

- Indicator assessment (marked from 1 to 5)

  pertinence (must respond to a problem),

  simplicity (of conception, implementation & representation),

  reproducibility (to allow follow-up over time),

  profitability (must not incur over-high costs).

# Category A. Risk of excessive exploitation of water resources A.1. Increase the safety of the water supply to users

Indicator: Regulated volume compared to input flows

#### Definition:

The indicator is based on two sub-indicators:

- V1: volume regulated by all dams
- V2: volume regulated by all shared large dams.

Large dams refer to criteria used in the World register of Dams from the International Commission on Large Dams (ICOLD):

- \* Height > 15 m or
- \* Height > 10 m and crown length > 500 m or
- \* Memory space > 1 million m3 or
- \* Calculation floods > 2000 m /s.

#### Unit:

Percentage

## Methodological indications:

V1 = Sum of volume for all large dams / Mean annual input flows

V2 = Sum of volume for shared large dams / Mean annual input flows

Shared dams are those managed by an International (supra-national) Organisation of Basin management.

### Data sources that have been identified and are possible:

To be defined

### The indicator's geographical coverage:

Transboundary basin

## Which institutional context?

The PI system works better for an existing transboundary RBP, rather than a broad emerging collaborative process which has no organizational format.

The goal is to reach a system with significant benefits and little time-consuming: pragmatic, in line with local realities, iterative – feed back.

Benchmarking or reporting on assessment of policy implementation?

Importance of synergies with internal reporting process within the RBOs.

Performance Indicators must correspond to Basin Organisation objectives and reporting process.

## Data availability and easiness to fill-in the PIs?

Having a high number of performance indicators but not being able to fill them seemed not to be appropriate to some basin organisations.

In regards of data existence, availability or simply because of time consumption and internal resources of the RBOS.

Some basins yet decided to start with light and pragmatic sets of indicators that won't require too many efforts in order to fill-in and to extend them on a later stage.

Synergies with other African basin initiatives?

Importance of fostering exchanges and experience feedback in that matter at Pan-African level.

Attention will be paid on associating other basins, thanks to institutions like African Network of Basin Organizations (ANBO).

The importance or finding synergies with the activities on Information Systems in Africa have also been underlined.

Replication / adaptation in other international and national contexts
