

# GWP SDG Preparedness Facility (SDG-PF): The case of Moldova

# SDG-PF: Moldova

- GWP launched the SDG Preparedness Facility in early 2016 with the purpose of:
  - Utilizing the GWP’s Country Water Partnerships (CWPs) to facilitate the engagement of their partners to help national governments implement the water-related SDGs
  - But, also SDG 17, or the “Means of implementation” goal, where GWP can leverage its partnerships to support SDG implementation within national processes related to financing, policy and institutions, monitoring, knowledge and capacity and strengthening partnerships.

# SDG-PF: Moldova

- GWP has started this process with a first group of 16 CWPs from 10 of GWP's 13 regions (European countries among the first batch: Hungary and Moldova)
- The 16 CWPs are in the middle of a "Design Phase" whereby they are developing three-year work plans to engage their partnerships in supporting national-level water-related SDG implementation
- Implementation should begin in early 2017

# SDG-PF: Moldova

Main issues for implementation of the SDG goals in Moldova:

- water quality improvement, reduction of pollution and promotion of reuse and recycling;
- water-use efficiency;
- integrated water resources management;
- the protection of water-related ecosystems;

Based on that expectations from the results look like:

- What is current situation in regard to goals and targets
- Identification of main targets to achieve according to national priorities and identified needs

# SDG-PF: Moldova

## Main activities to be developed by GWP Moldova

- Contribution to the policies, consultation on access to financing, improvements in monitoring, through cooperation with different level of authorities
- Improvement of planning of the water related activities, especially on local level
- Strengthening capacities of authorities (training, information exchange etc) on the base of materials developed by GWP CEE
- Networking and partnership

# SDG-PF: Moldova

**GWP@20**  
YEARS OF IMPACT  
1996 – 2016

Development of recommendations for the non-EU space:

- Risk management: drought and flood – planning of local agendas to include relevant measures
- Development of regional cooperation (community to community) in transboundary river basins
- Preparing of project files of activities needed for implementation of the SDG in Moldova, especially in rural areas

As a country with the status as associated to the EU, national authorities assumed responsibility to implement provisions of the EU Directives and SDG should serve as an instrument in development of the planning of water management activities

Thank you for attention
