PARIS/MANILA – MAWAC's Project

The Rehabilitation of Pasig River

Pasig River's Problematics:

- Considered biologically dead
- Continuous discharge of waste and wastewater
- This 25 km long river crosses the most densely populated area of the Philippines
- More than 3 million people live on its outskirts

A multisectoral approach as an effective response:

- implementation of a wastewater treatment project on Estero San Francisco
- creation of a master plan
- implementation of a household waste collection and treatment system
