Delineation and initial characterisation of groundwater bodies

Delineation of groundwater bodies at Júcar RBD

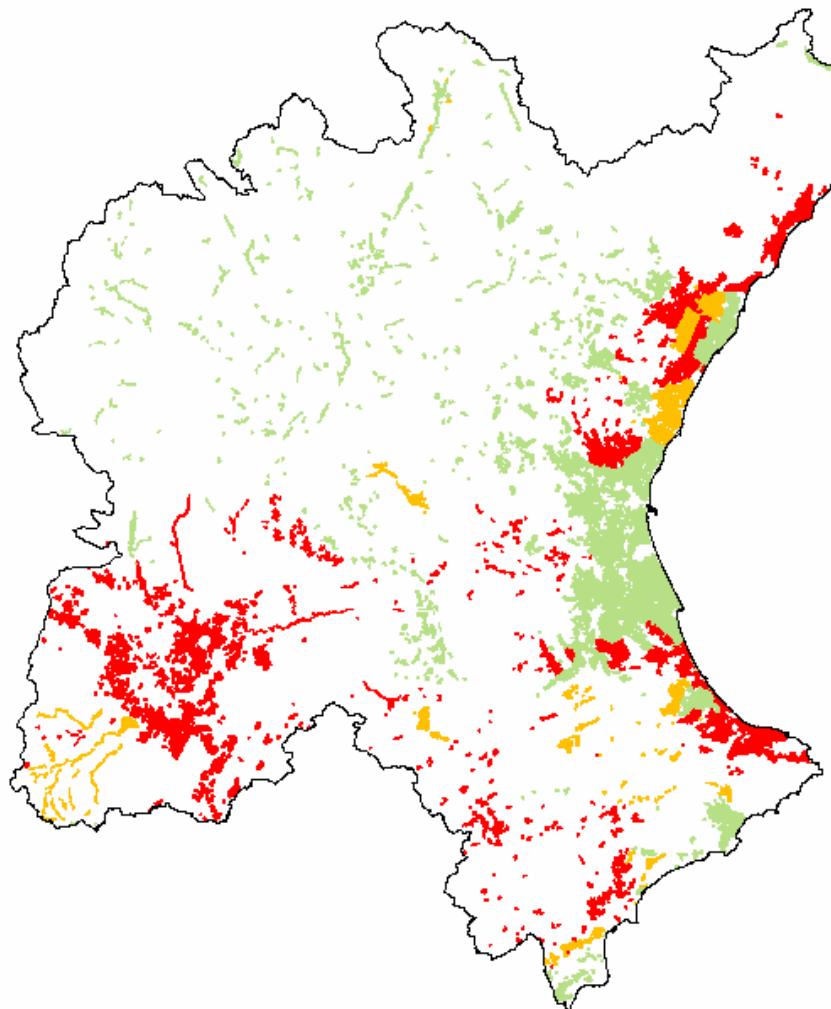

Area (km²)	43 000
Population (inhabitants)	4 360 000
Equivalent population due to tourism (inhabitants)	1 400 000
Irrigated land (ha)	370 000
Water demand (hm³/year)	3 600
Water resources (hm³/year)	3 300
Origin of water resources	Surface water(25%) Groundwater(75%)

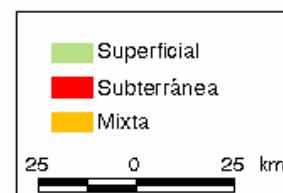

- Delineation criteria established on national scale
- 79 groundwater bodies
- Size ranges from 10 km² to 6.289 km² (mean value 513 km²)

Origin of water for irrigation

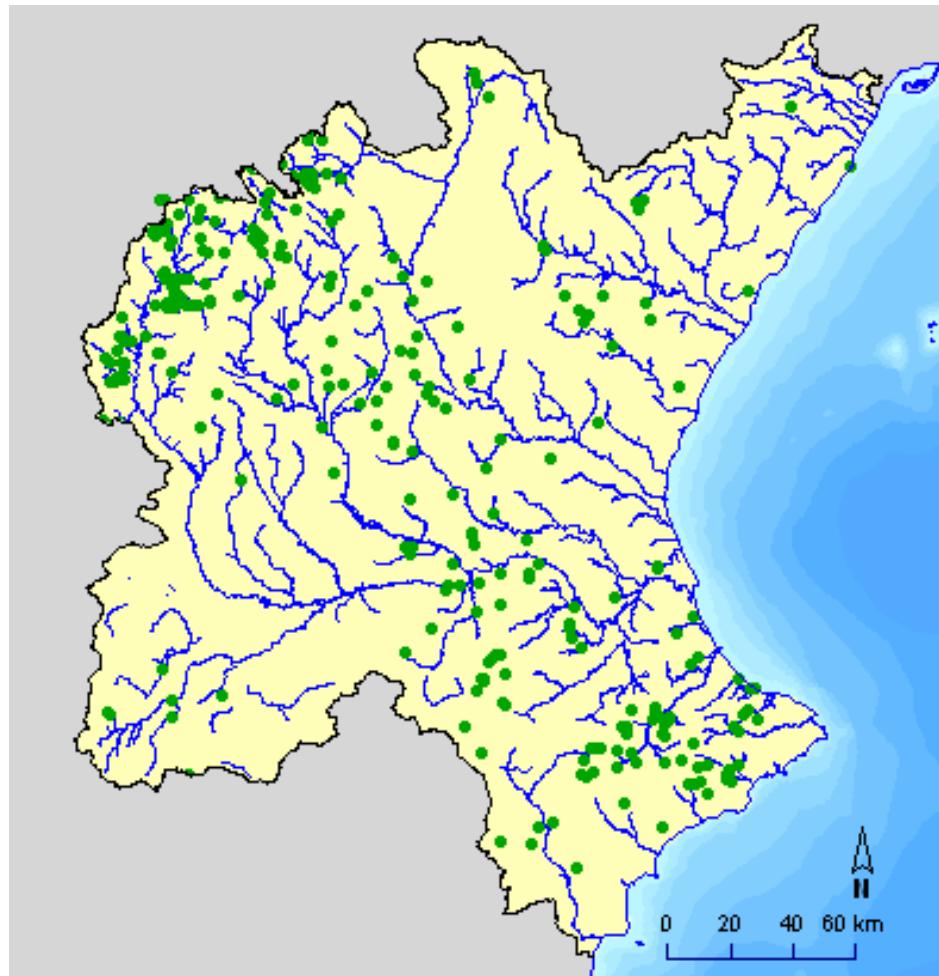

Well for groundwater abstraction in aquifers

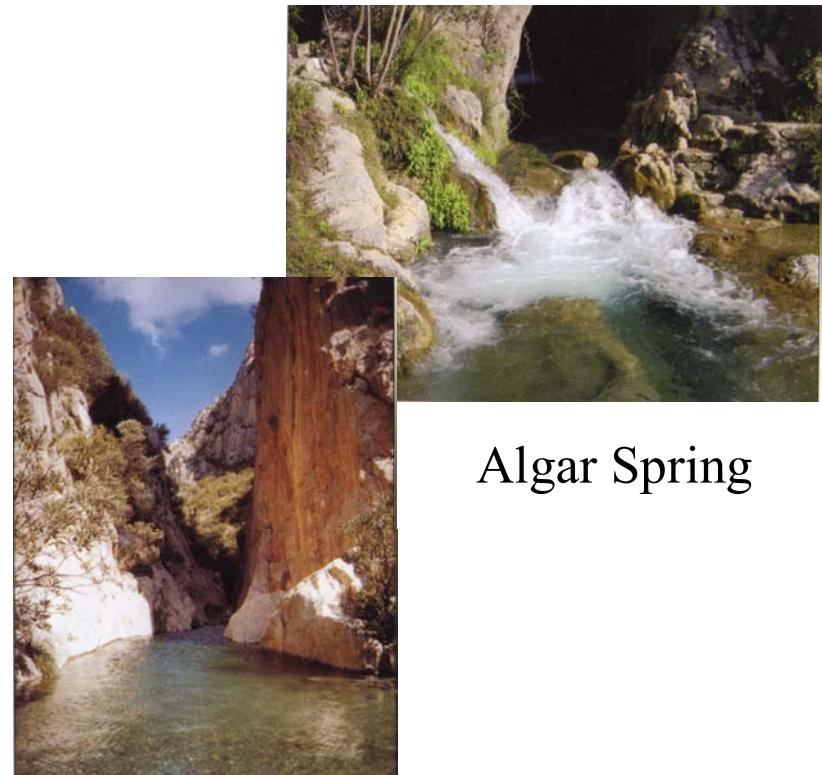

Initial characterisation of groundwater bodies

Código	Nombre	Superficie (km ²)	Tipo	Litología	Dependencia con ecosistema acuático	Ecosistemas acuáticos dependientes (ríos y zonas húmedas)
080.001	HOYA DE ALFAMBRA	745.69	Libre	Detritico	No	
080.002	JAVALAMBRE OCCIDENTAL	608.70	Mixto	Carbonatado	No	
080.003	JAVALAMBRE ORIENTAL	807.83	Mixto	Carbonatado	Sí	Río Mijares
080.004	MAESTRAZGO OCCIDENTAL	865.53	Mixto	Carbonatado	No	
080.005	PUERTOS DE BECEITE	376.75	Libre	Carbonatado	Sí	Río Cenia
080.006	PLANA DE CENIA	246.50	Mixto	Mixto	No	
080.007	PLANA DE VINAROZ	101.86	Libre	Detritico	No	
080.008	MAESTRAZGO ORIENTAL	2285.30	Mixto	Carbonatado	Sí	Ramblas del Maestrazgo
080.009	PLANA DE OROPESA-TORREBLANCA	69.87	Libre	Detritico	Sí	Prat de Cabanes - Torreblanca
080.010	LUCENA-ALCORA	1105.46	Mixto	Carbonatado	Sí	Río Villahermosa
080.011	HOYA DE TERUEL	607.26	Mixto	Carbonatado	No	
080.012	ARQUILLO	180.29	Mixto	Carbonatado	Sí	Río Guadalaviar
080.013	GEA DE ALBARRACÍN	152.77	Libre	Carbonatado	Sí	Río Turia o Guadalaviar

Dependence with aquatic ecosystems (springs)

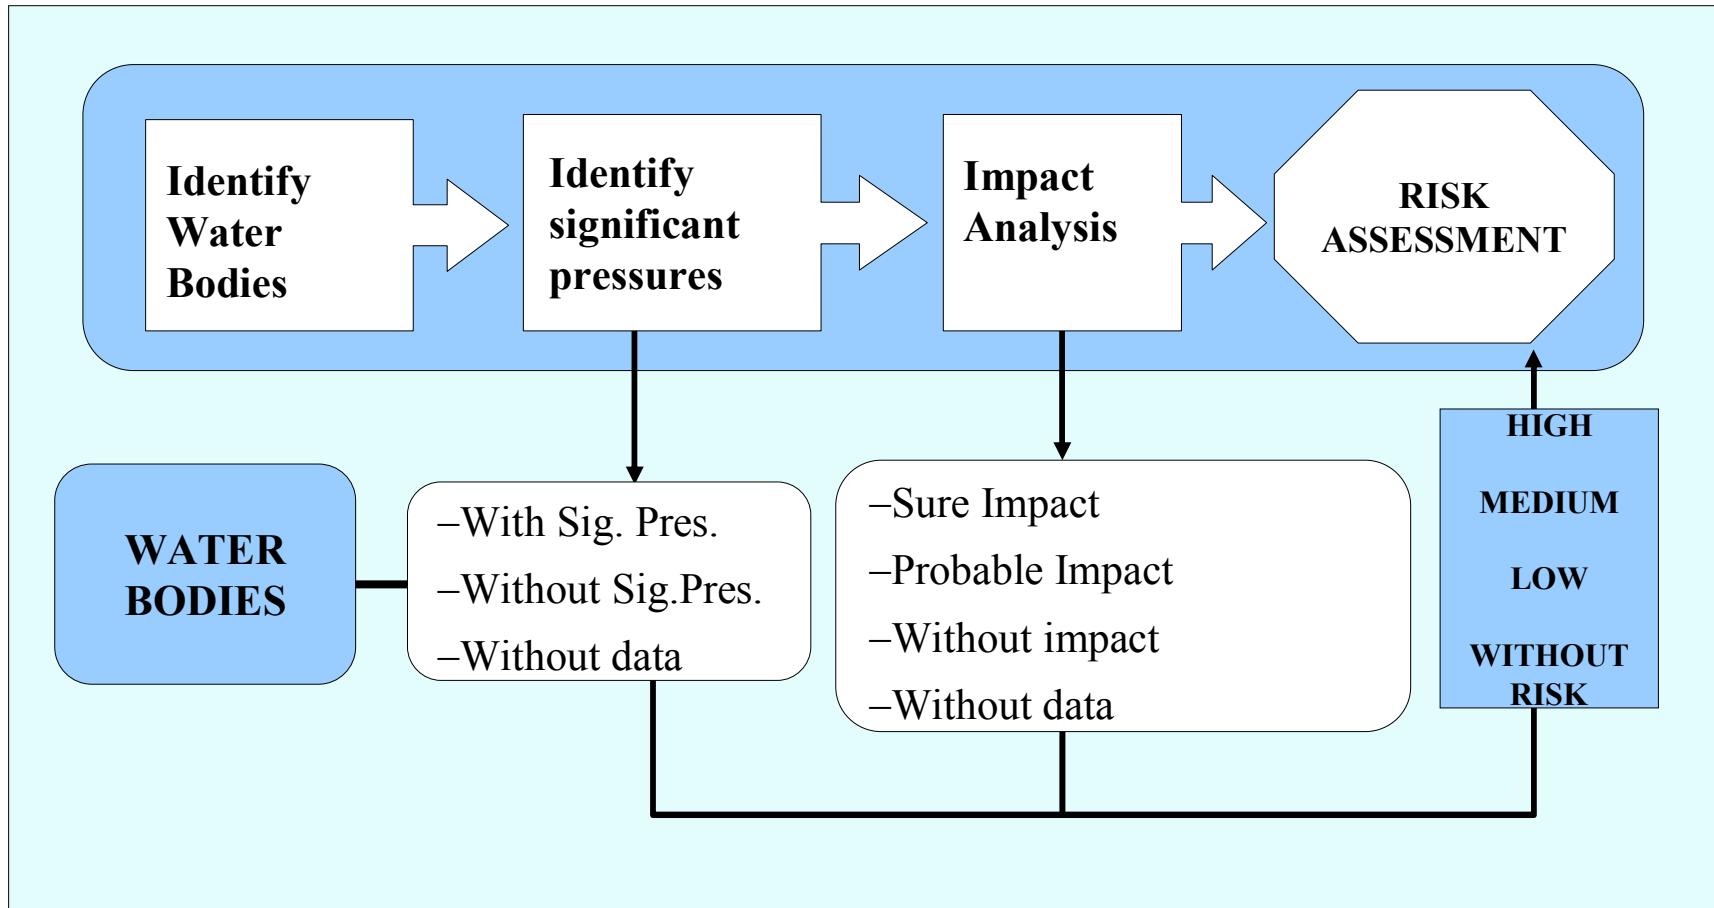

Inventory of springs

Algar Spring

Effect of human activity on groundwater bodies

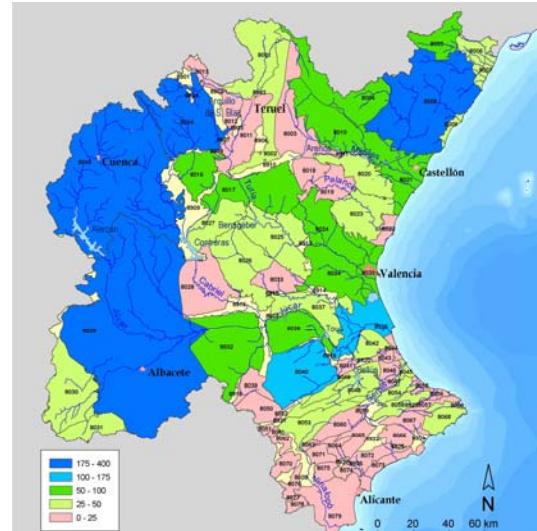

Pressure-impact analysis

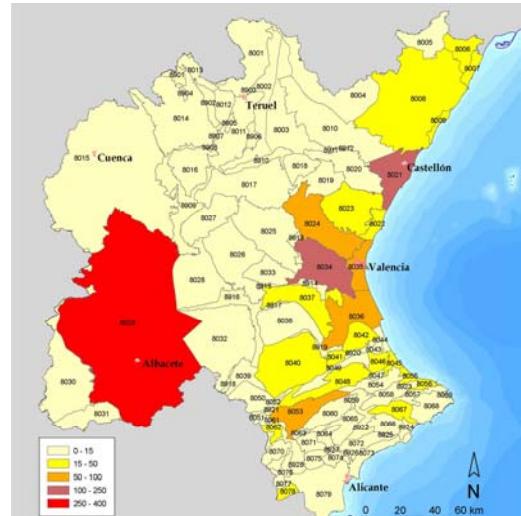

Main pressures on groundwater bodies

Abstractions	Diffuse pollution	Marine intrusion
Urban and industrial use	Use of fertilisers	Groundwater abstractions near the coast
Agricultural use	Use of pesticides	

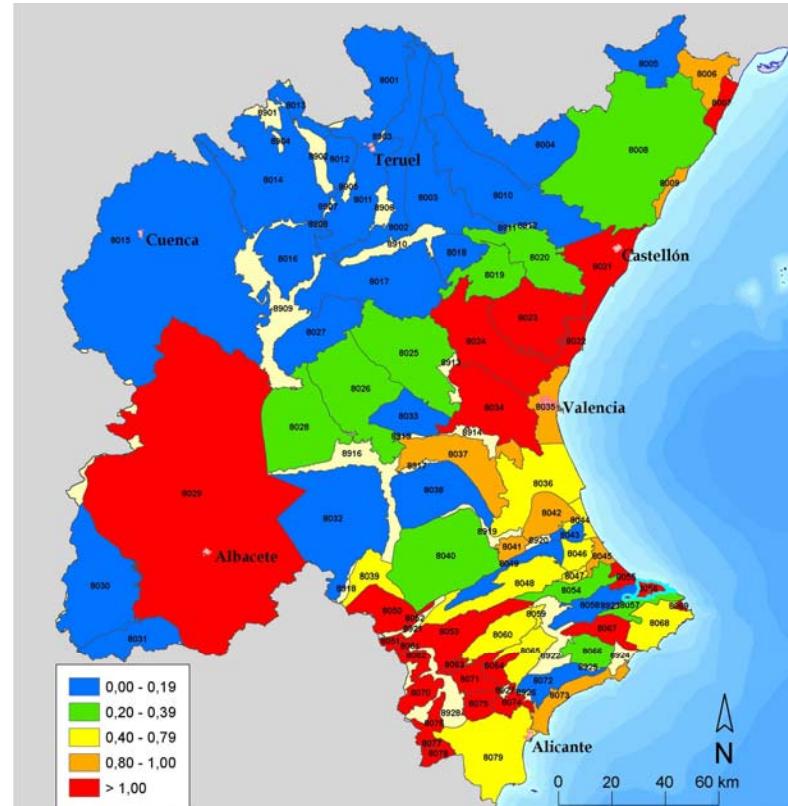

Assessment of pressures due to abstractions

Available resource (hm^3/year)

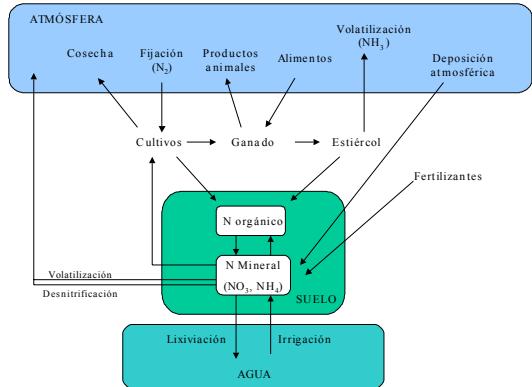

Abstraction (hm^3/year)

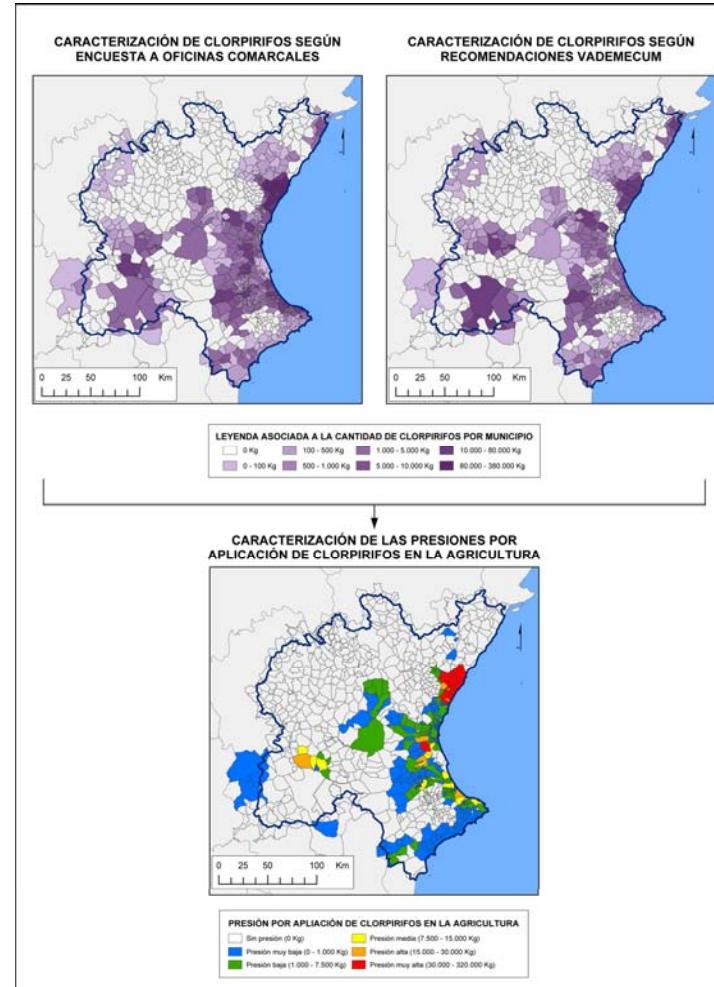

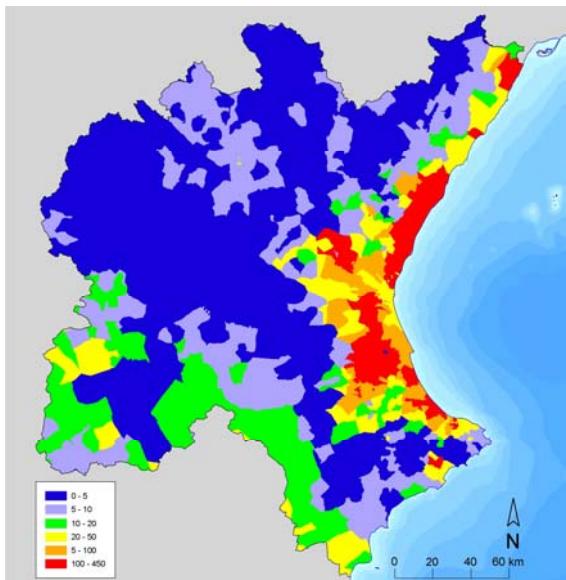

Exploitation index =
abstraction / available
resource

Pressure: diffuse pollution (excess of agricultural nitrogen and pesticides)

Modelling excess of agricultural
nitrogen in the soil

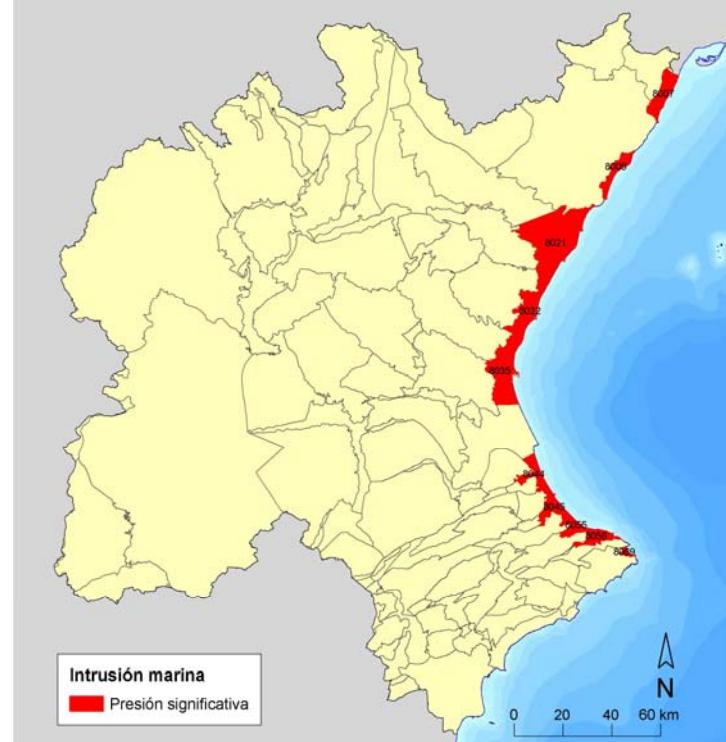

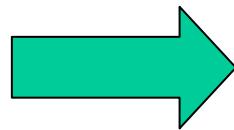

Pesticides

Analysis of pressures due marine intrusion

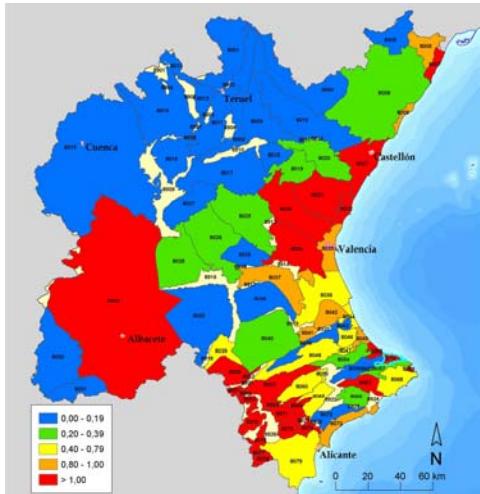

Abstractions near the coast (hm³/year)

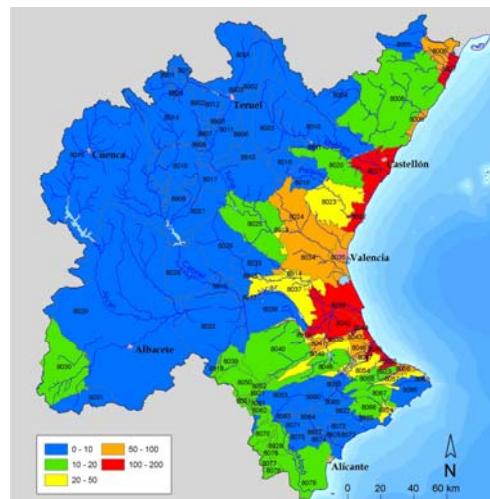

Significant pressure due to marine intrusion

Pressures on groundwater

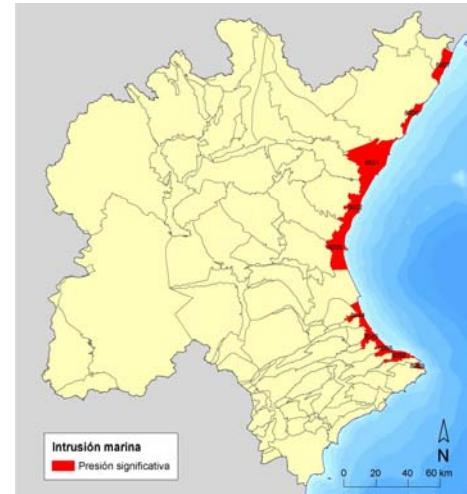

Exploitation index

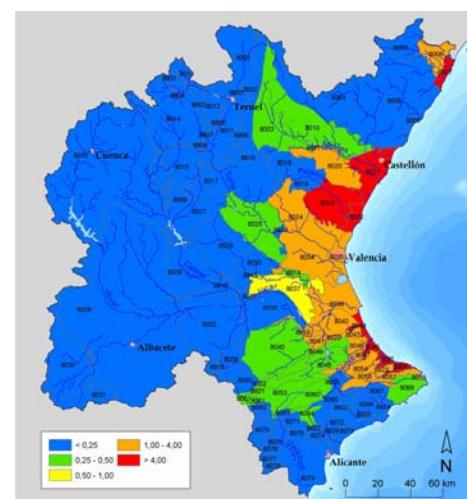

Excess of
nitrogen in the
soil
(kg/ha/year)

Saline intrusion of
seawater

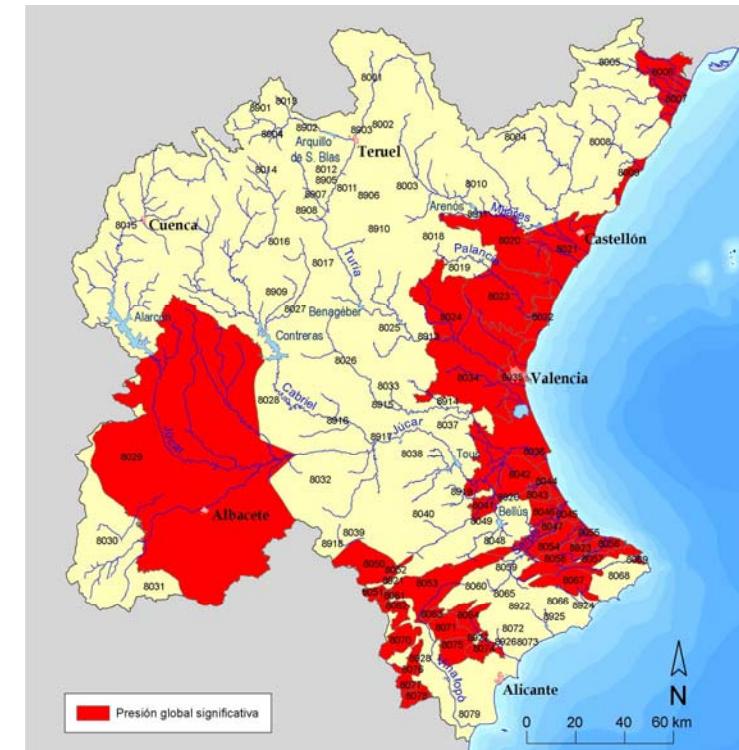

Pesticides applied on
the soil (kg/ha/year)

Groundwater bodies with significant global pressure

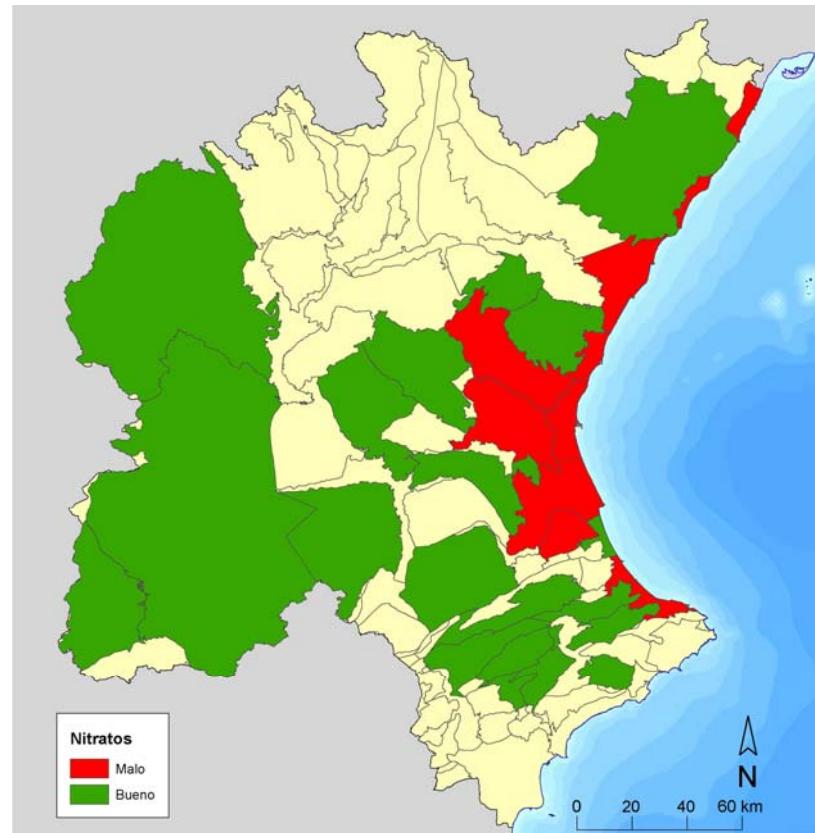

Código	Nombre	Índice de explotación K>1	Fuentes de contaminación puntual	Fuentes de contaminación difusa		Intrusión marina	Presión global significativa
				Exceso nitrógeno	Pesticidas		
080.001	HOYA DE ALFAMBRA	No	No	No	No	No	No
080.002	JAVALAMBRE OCCIDENTAL	No	No	No	No	No	No
080.003	JAVALAMBRE ORIENTAL	No	No	No	No	No	No
080.004	MAESTRAZGO OCCIDENTAL	No	No	No	No	No	No
080.005	PUERTOS DE BECEITE	No	No	No	No	No	No
080.006	PLANA DE CENIA	No	No	Sí	Sí	No	Sí
080.007	PLANA DE VINAROZ	Sí	No	Sí	Sí	Sí	Sí
080.008	MAESTRAZGO ORIENTAL	No	No	No	No	No	No
080.009	PLANA DE OROPESA-TORREBLANCA	No	No	Sí	No	Sí	Sí
080.010	LUCENA-ALCORA	No	No	No	No	No	No
080.011	HOYA DE TERUEL	No	No	No	No	No	No
080.012	ARQUILLO	No	No	No	No	No	No

Sure impact

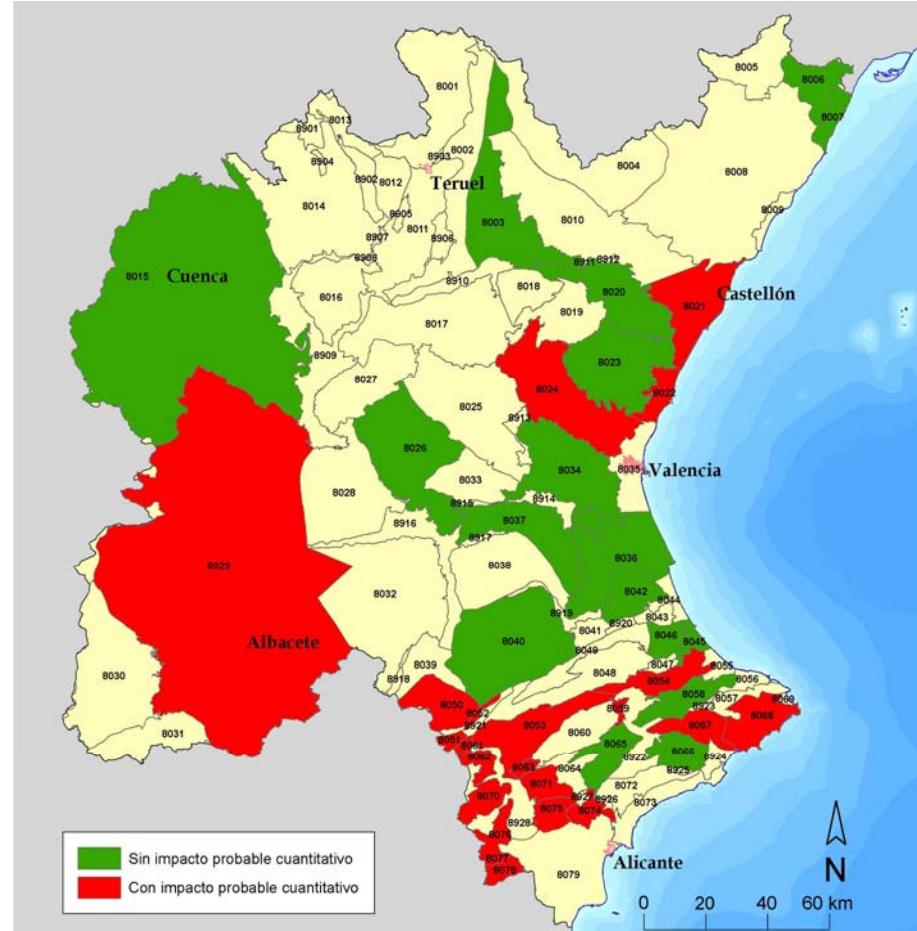

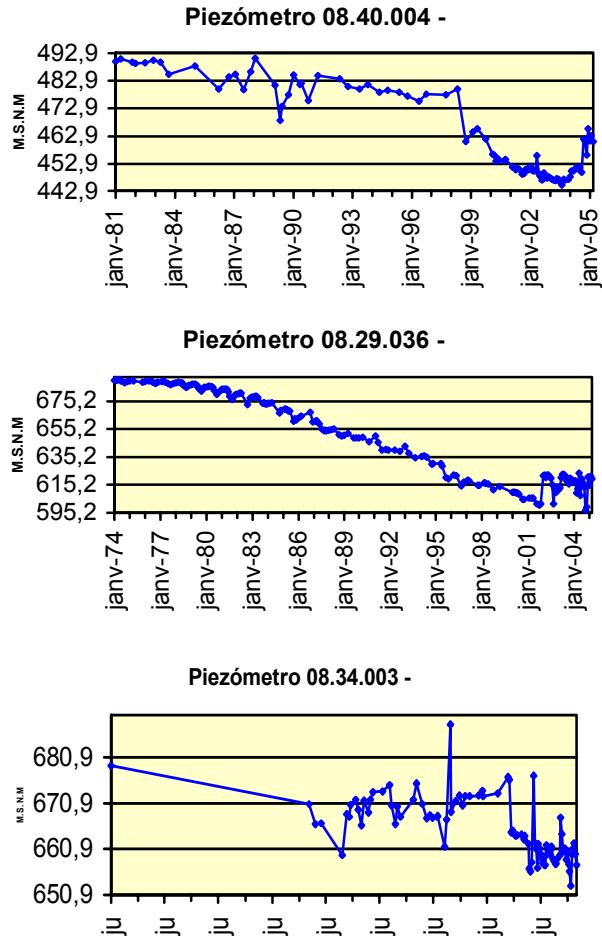

Groundwater bodies with provisional overexploitation declaration

Groundwater bodies with chemical sure impact: nitrate > 50 mg/l

Probable impact: Characterisation of quantitative status

Groundwater bodies with
significant water level decreases

Quantitative probable impact

Improvements on the monitoring network

Water level monitoring
network (year 2005)

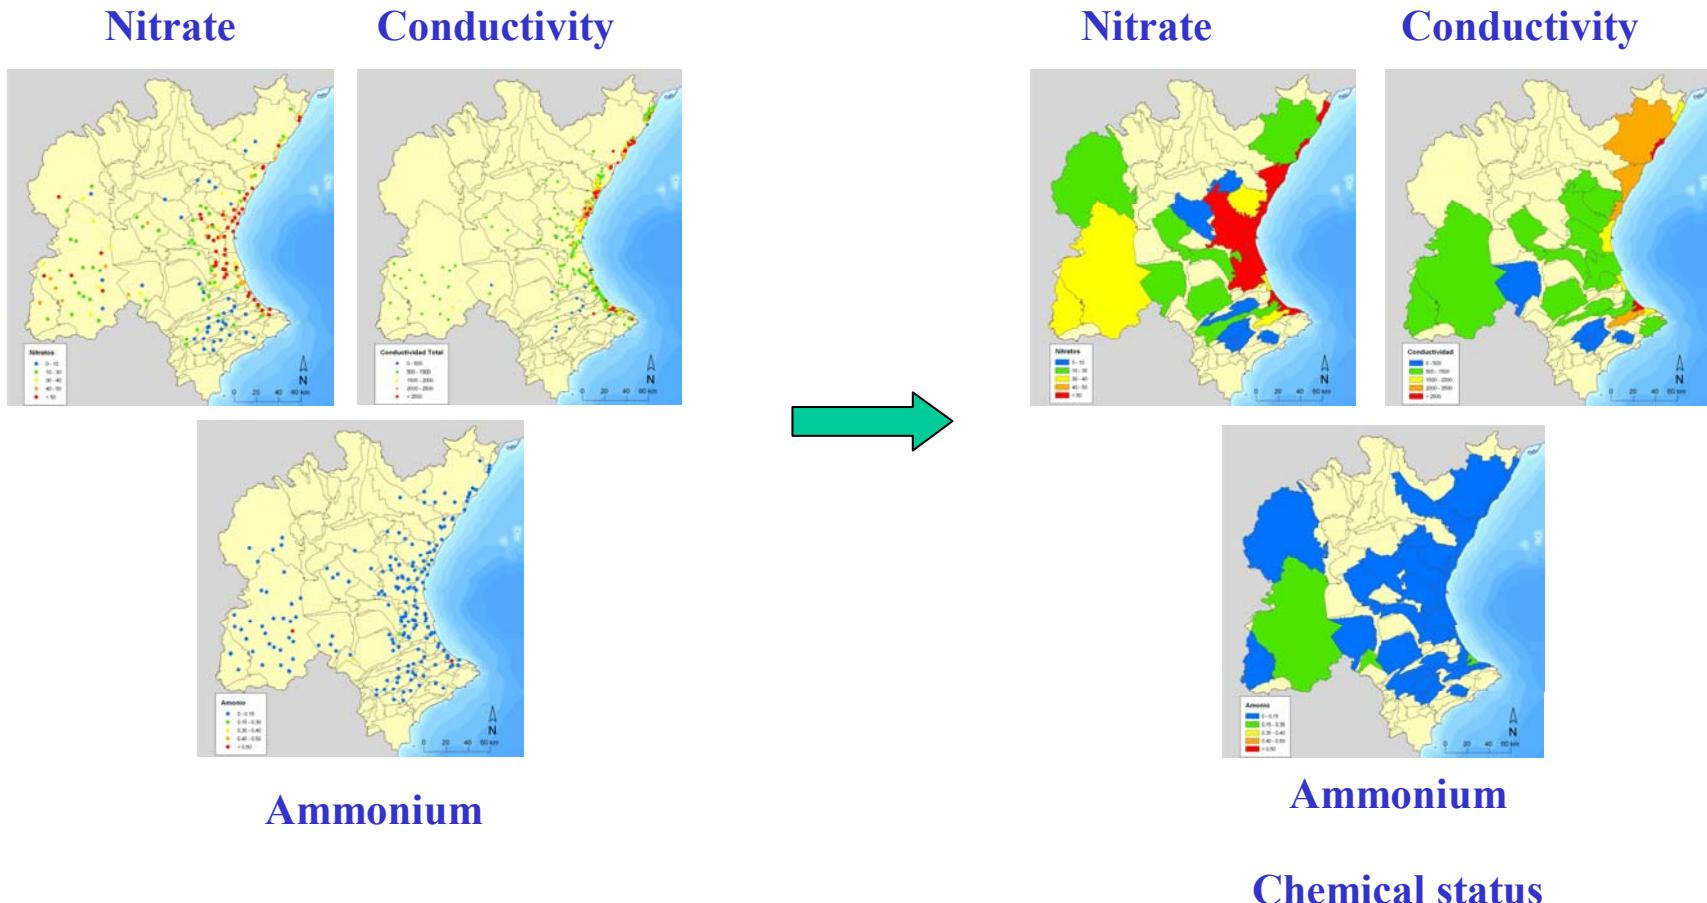

130 control points

Improved water level
monitoring network (under
construction)

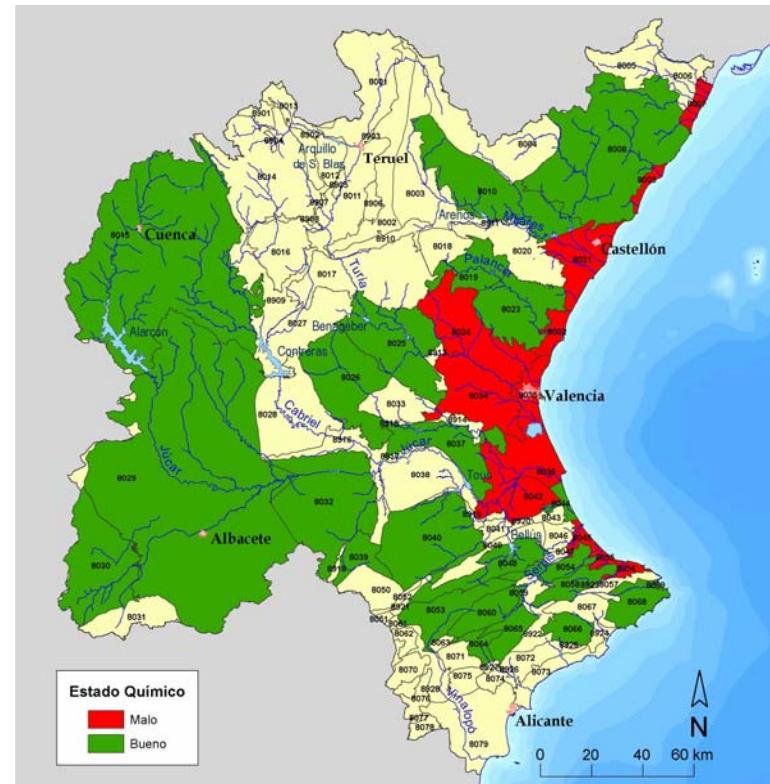

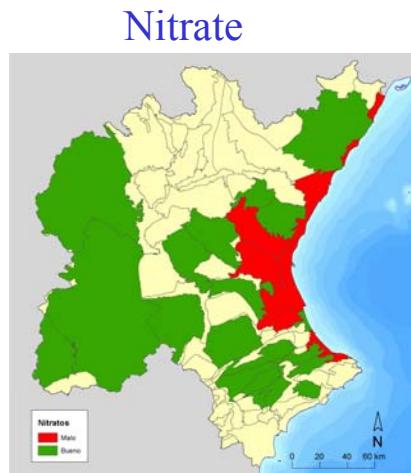

287 control points

Probable impact: Characterisation of chemical status

Water quality monitoring networks (150 control points) are used to define chemical status of groundwater bodies

Probable impact: map of chemical status

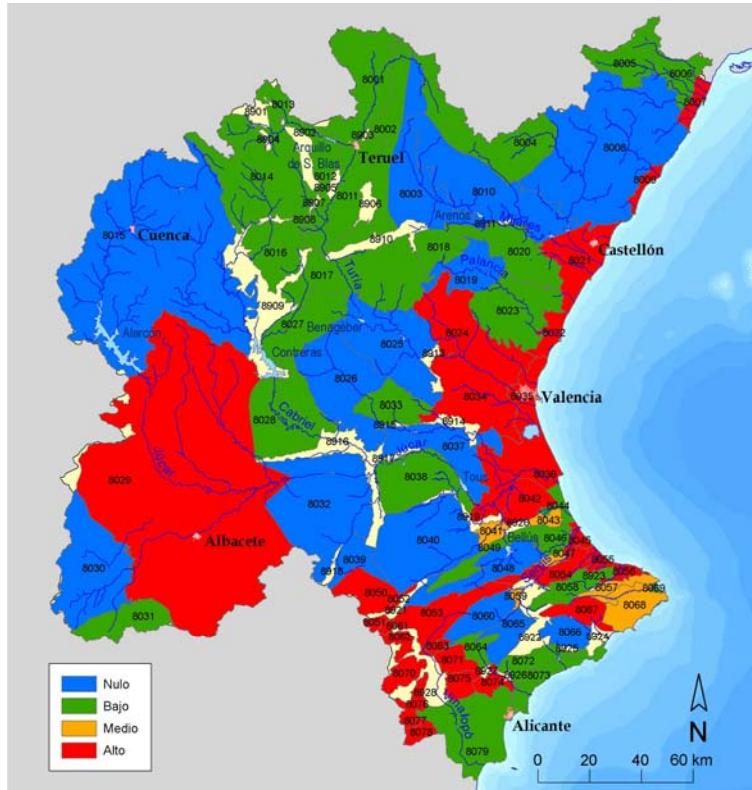

Chemical Status

Combination of pressures and impacts to define risk not to reach EO

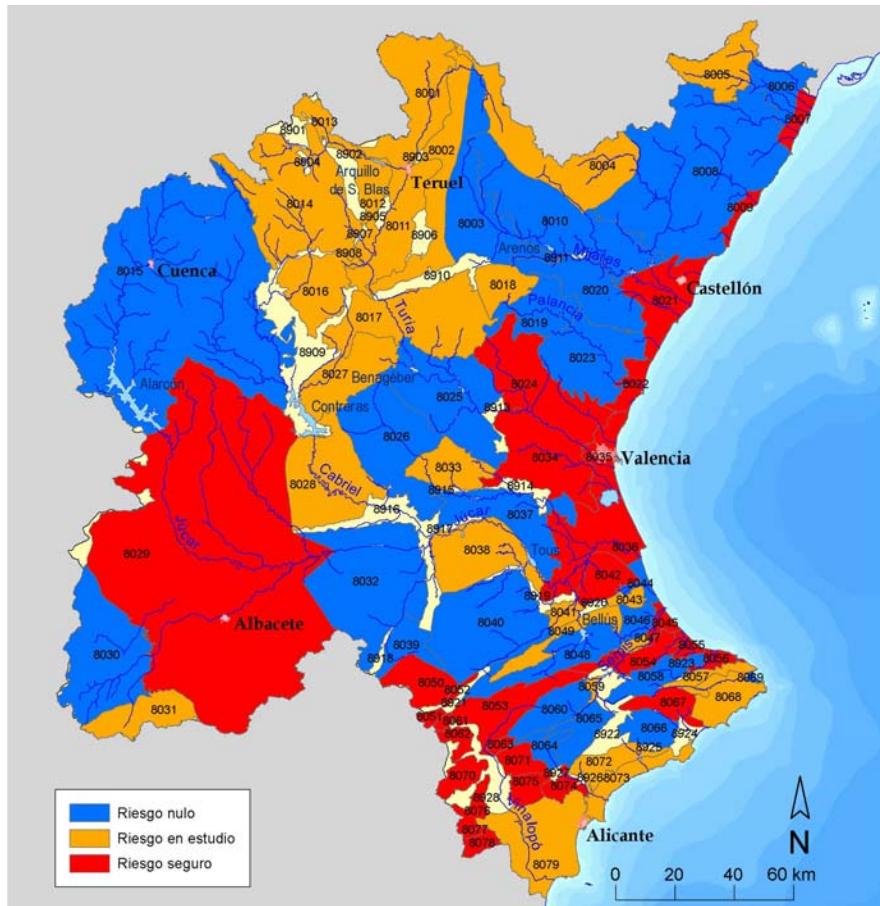

RISK		IMPACT			
		SURE	PROBABLE	NO IMPACT	NO DATA
PRESSURE	SIGNIFICATIVE	HIGH	LOW	MEDIUM	
	NO SIGNIFICATIVE	HIGH	MEDIUM	NULL	LOW
	NO DATA			LOW	NOT ALLOWED

GW at risk of not to reach environmental objectives

Risk	Number og GW	Percentage
High	29	36,7%
Medium	6	7,6%
Low	28	35,4%
Null	16	20,3%

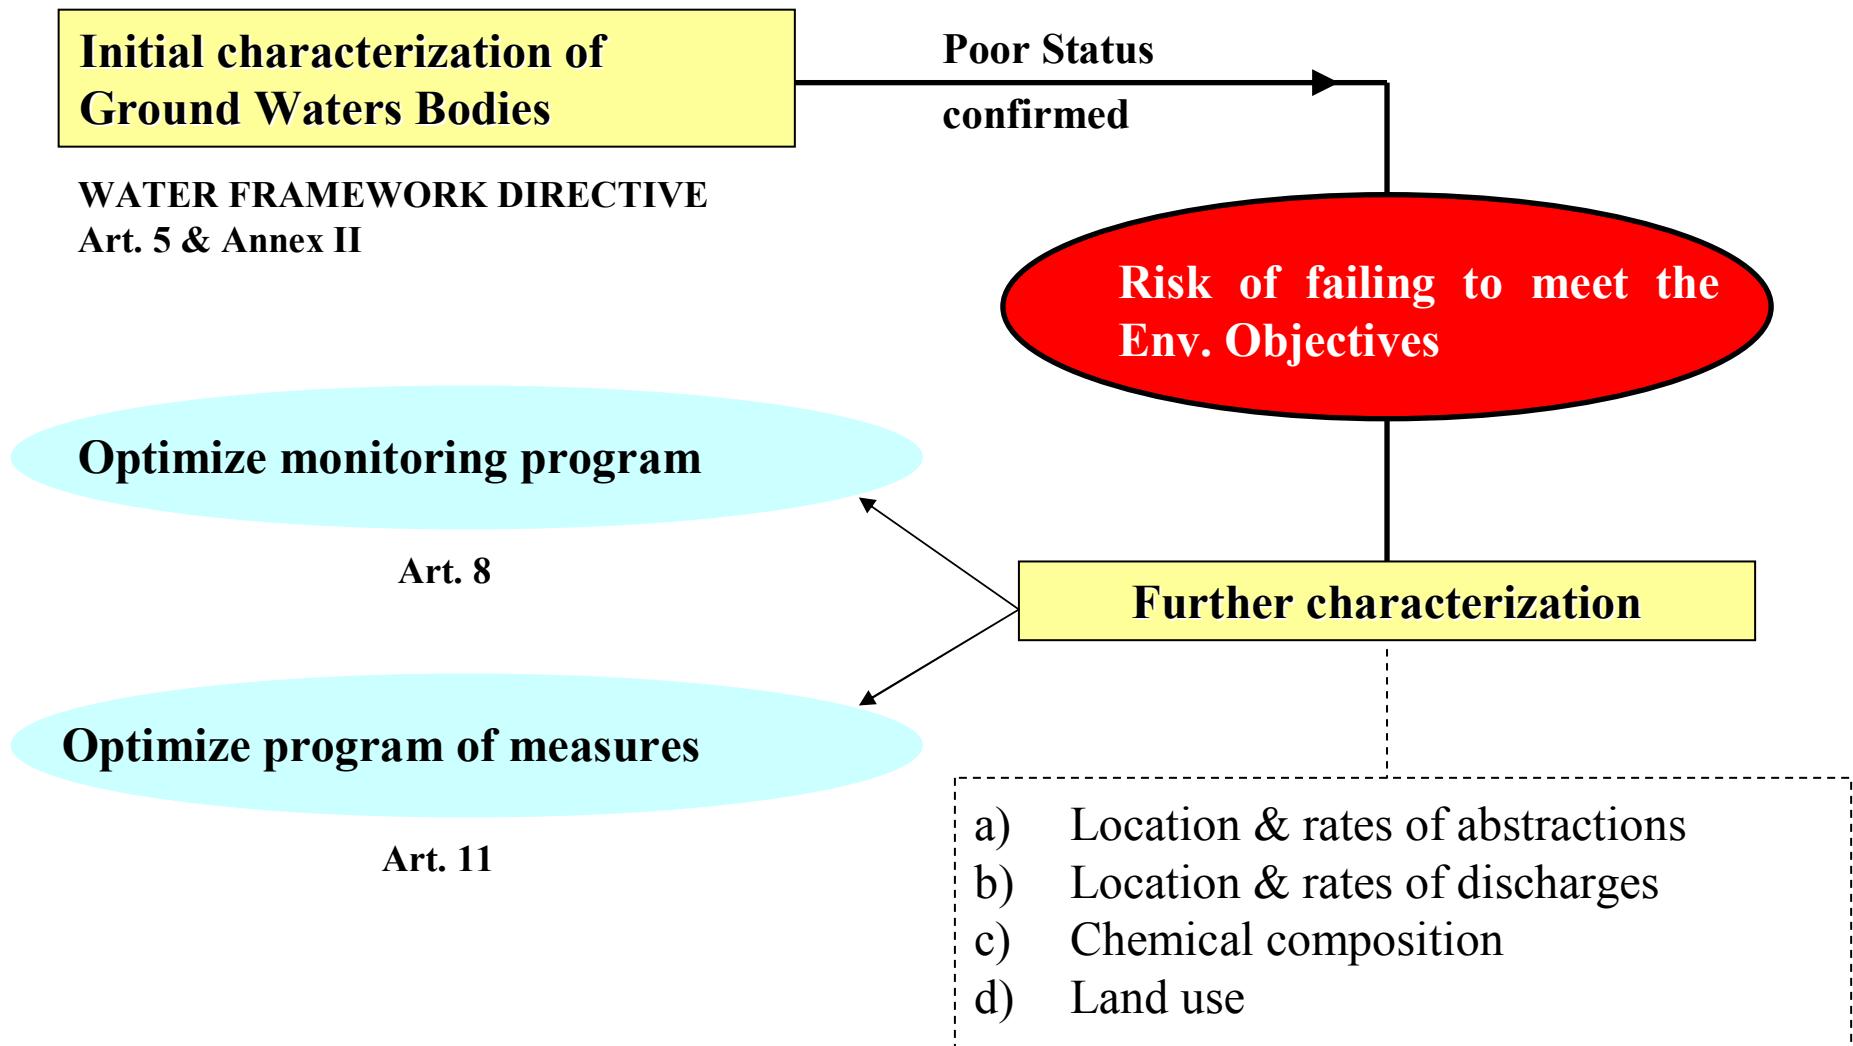

GW at risk of not to reach environmental objectives

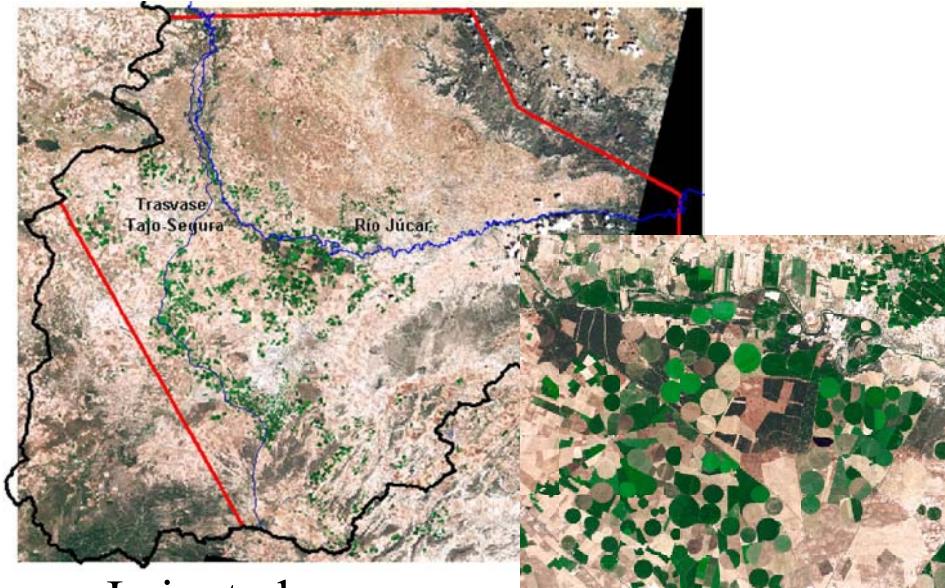

Groundwater body at risk as consequences of pressures due to:		%	Risk on Study (ROS)
	Sure Risk (SR)		
1	Diffuse pollution: fertilizers	15,19% (12)	2,53% (2)
2	Diffuse pollution: pesticides	15,19% (12)	5,06% (4)
3	Abstractions	29,11% (23)	0% (0)
4	Marine intrusion	10,13% (8)	0% (0)

Further characterisation of groundwater bodies

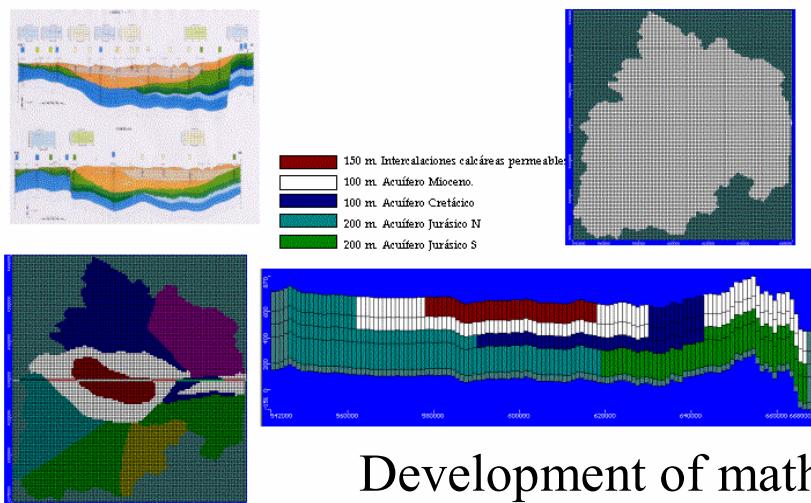

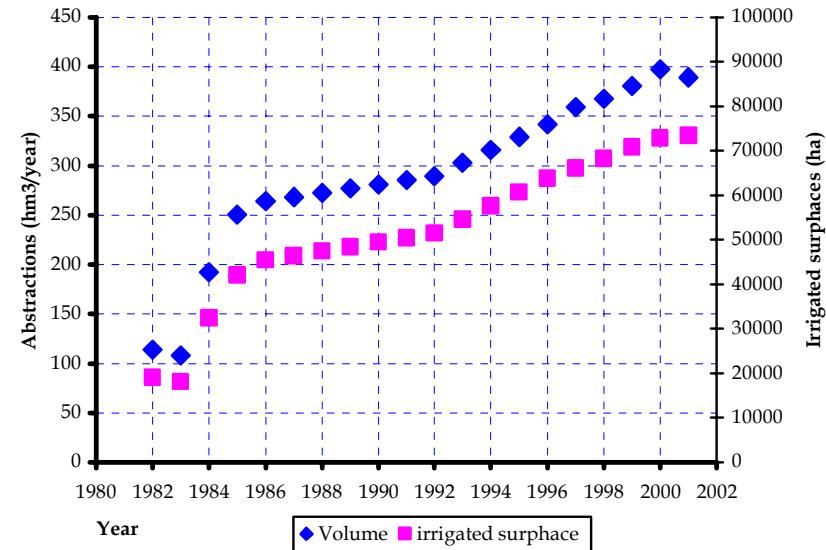

Further Groundwater Body characterization

Further characterisation: Case study of Mancha Oriental Aquifer

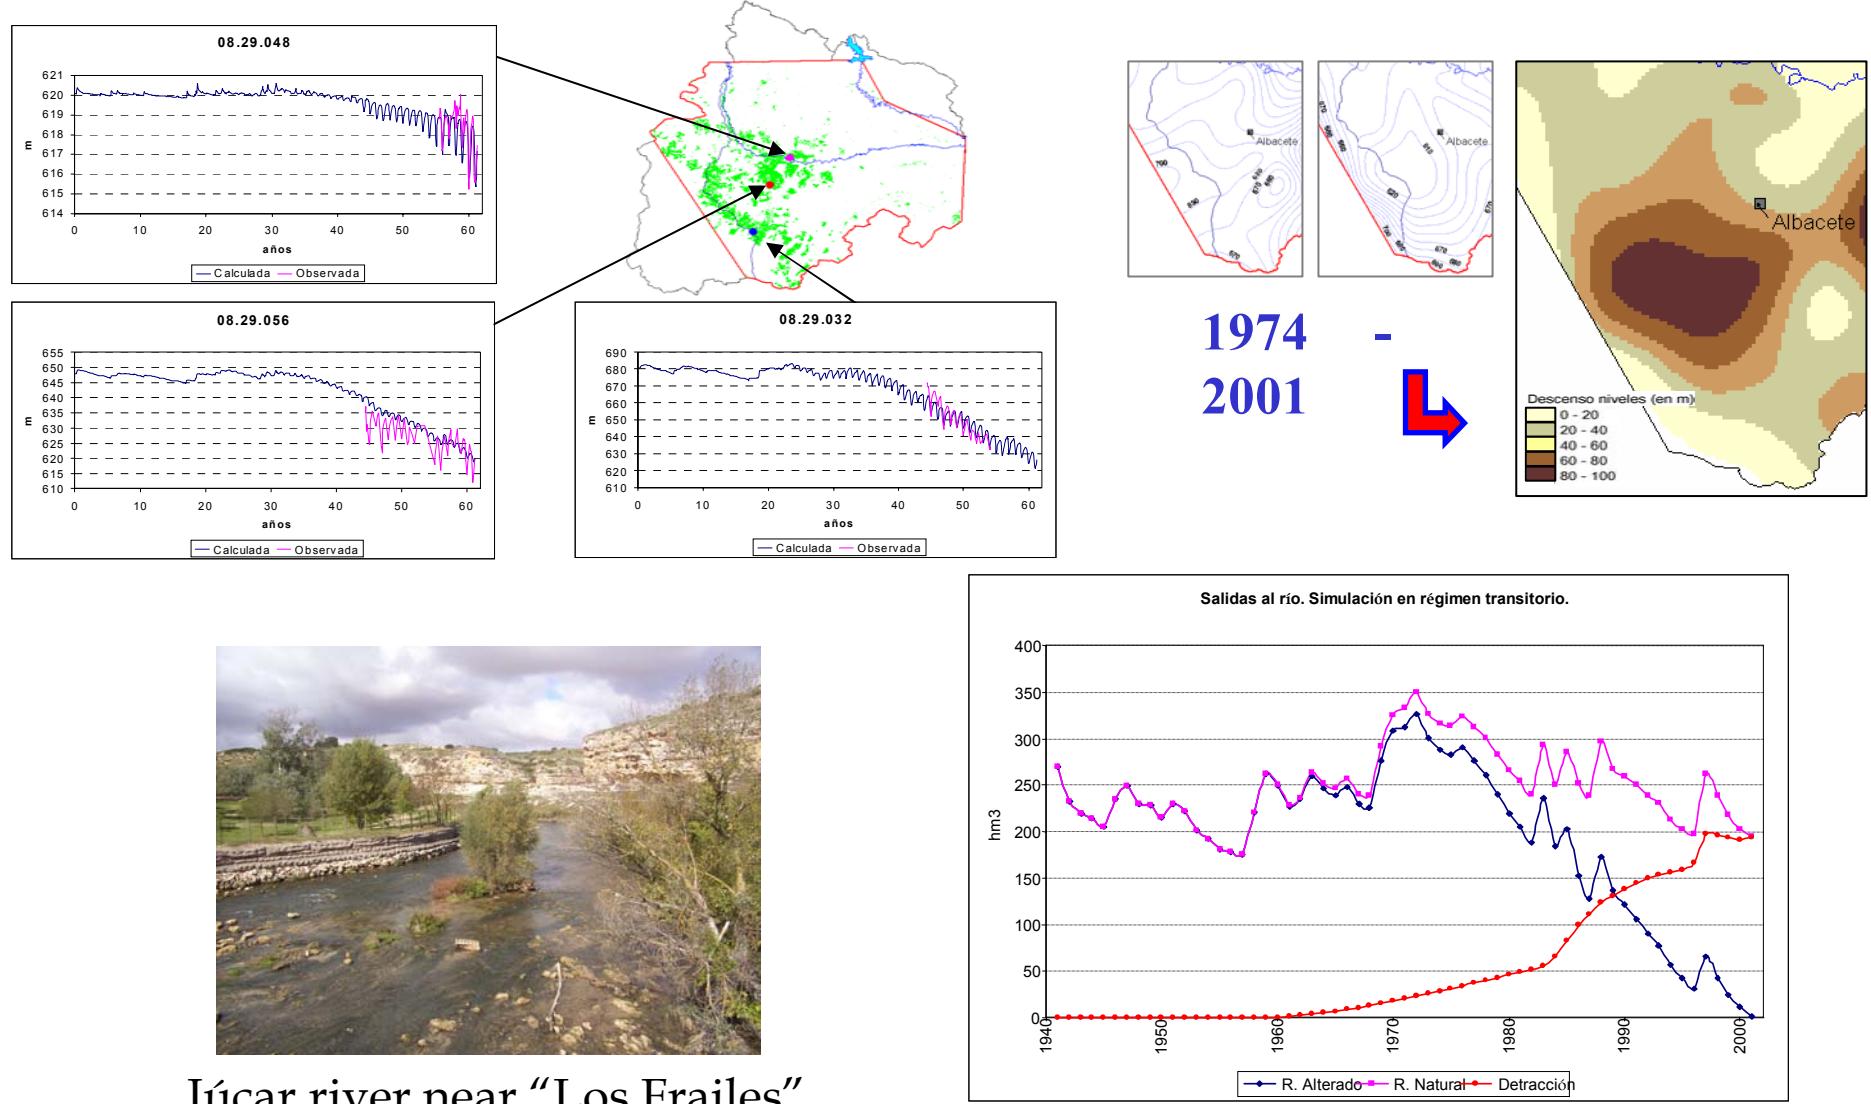

Irrigated area

Development of mathematical models

Modelling Mancha Oriental aquifer

Júcar river near "Los Frailes"
