Global recommendations for education and capacity building

Session description\* (180 words, please kindly use media-friendly language)

Improving water supply and sanitation services is a major priority for development, health and fight against poverty: more than 700 million people still lack ready access to improved sources of drinking water and 1 billion people still lack adequate sanitation infrastructure and practice open defecation.

Significant investments are made each year in an attempt to bridge the gap. But these investments do not always fully achieve their targets. This is often the result of either design faults in infrastructures or multiple deficiencies in the way they are operated and managed.

It is therefore vital to build the institutional, economic and technical training means for those who work in the water sector. This concluding session should help get recommendations to improve capacity building through adequate strategy agenda and sustainable financial allocations and, ultimately, water and sanitation services themselves.
