Thematic Process Session

Session T 4.3.4 - Building trust : Facilitating data and Information exchange between the riparian countries in transboundary basins

Thursday 16 April, 14h40-16h40 - Daegu EXCO, room DEC_304

Round table 2: Examples related to data and information sharing for transboundary basin management

Examples of transboundary water data management project outputs in Eastern Europe and Central Asia (FFEM/ SDC Project)

Mr. Paul HAENER

Main characteristics of the FFEM-EECCA project

- Project concept developed within the “**working group for Monitoring and assessment**” of the **Water Convention**” (Helsinki 1992)
- Objective: **Study how water data management could be reinforced in order to facilitate transboundary basins water management and joint assessments**
- Between Nov. 2010 and Sept 2013, activities on two pilot transboundary basins:
 - **Aral Sea Basin** in collaboration with EC-IFAS / IFAS
 - **Dniester River Basin** (Ukraine – Moldova)
- Project organized in 3 phases

1/ Diagnostic phase

2/ Support to water data management activities

3/ Dissemination of results

Outputs of the data management diagnostic phase

- **National technical workshops** in 6 countries with participation of the main national data producers and restitution in regional meetings
- **On-line database of actors** producing/using water related data/information
- **On-line catalogue of data sources (metadata)** updated by data producers
- **Diagrams of data flow** describing who exchange what with who (developed by the partners during the workshops)
- **Survey and analysis of the needs of the partners** concerning water data management

Catalogue of data sources
for assessing transboundary water resources in the EECCA countries

FFEM-EECCA PROJECT
QUESTIONNAIRE ON NEEDS
RELATED TO WATER DATA
ADMINISTRATION

Need Survey v01
Version draft
Date: July 2011

FFEM PROJECT
Capacity building in data administration for
assessing transboundary water resources in the
EECCA countries

Questionnaire for the analysis of needs related to data administration
expressed by the organisations involved in water management

1. IDENTIFICATION OF THE ORGANISATION

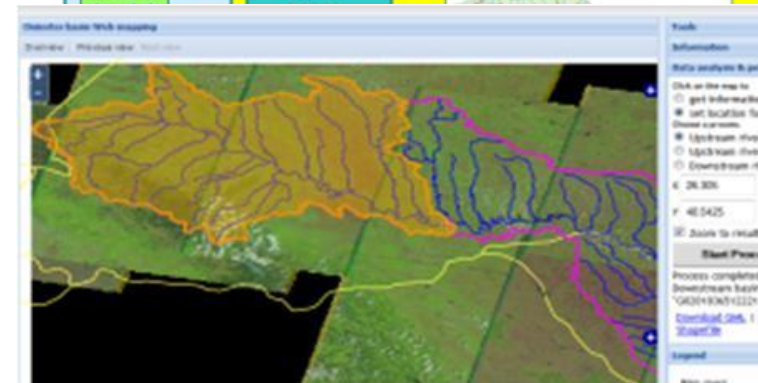

Some outputs of pilot activities reinforcing data management

- First prototype of **hydrological bulletin** on the Syrdarya basin (UNRCCA/EC-IFAS)
- **On-line Interactive water scheme on KZ part of Syrdarya river** giving access on the last water level/flow collected/sent by the various partners (Hydromet, KazVodhoz, Emergency service)
- Support to **conceptual study of national water information systems** in Tajikistan
- Support for **improving Water Code in Turkmenistan** for data administration
- **On line web mapping of surface water quality index** automatically processed and updated by the partners in **Moldova and Ukraine** on the Dniester basin
- **First water Web Processing Services** generating new geographic information useful for water management (ex: calculation of upstream basin up to one point) on the Dniester basin

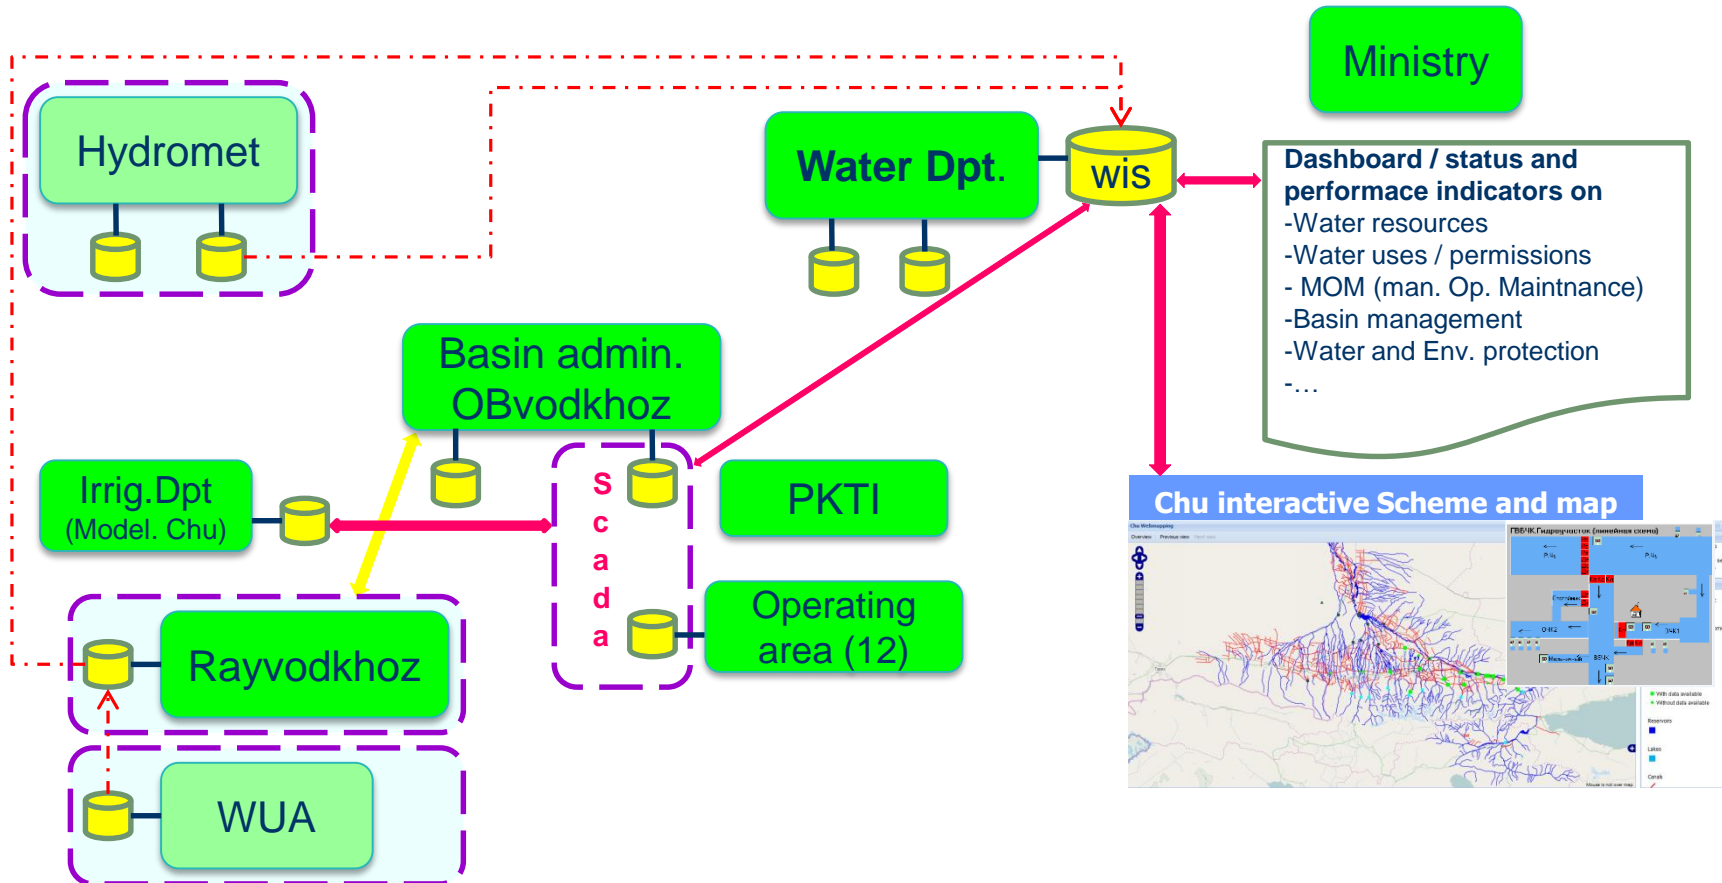

Text proposals

- **Recommendation n° 1: To position the national system of information on water as**

Example of the SDC/IMoMo project Working firstly at national level (case of activities in KG)

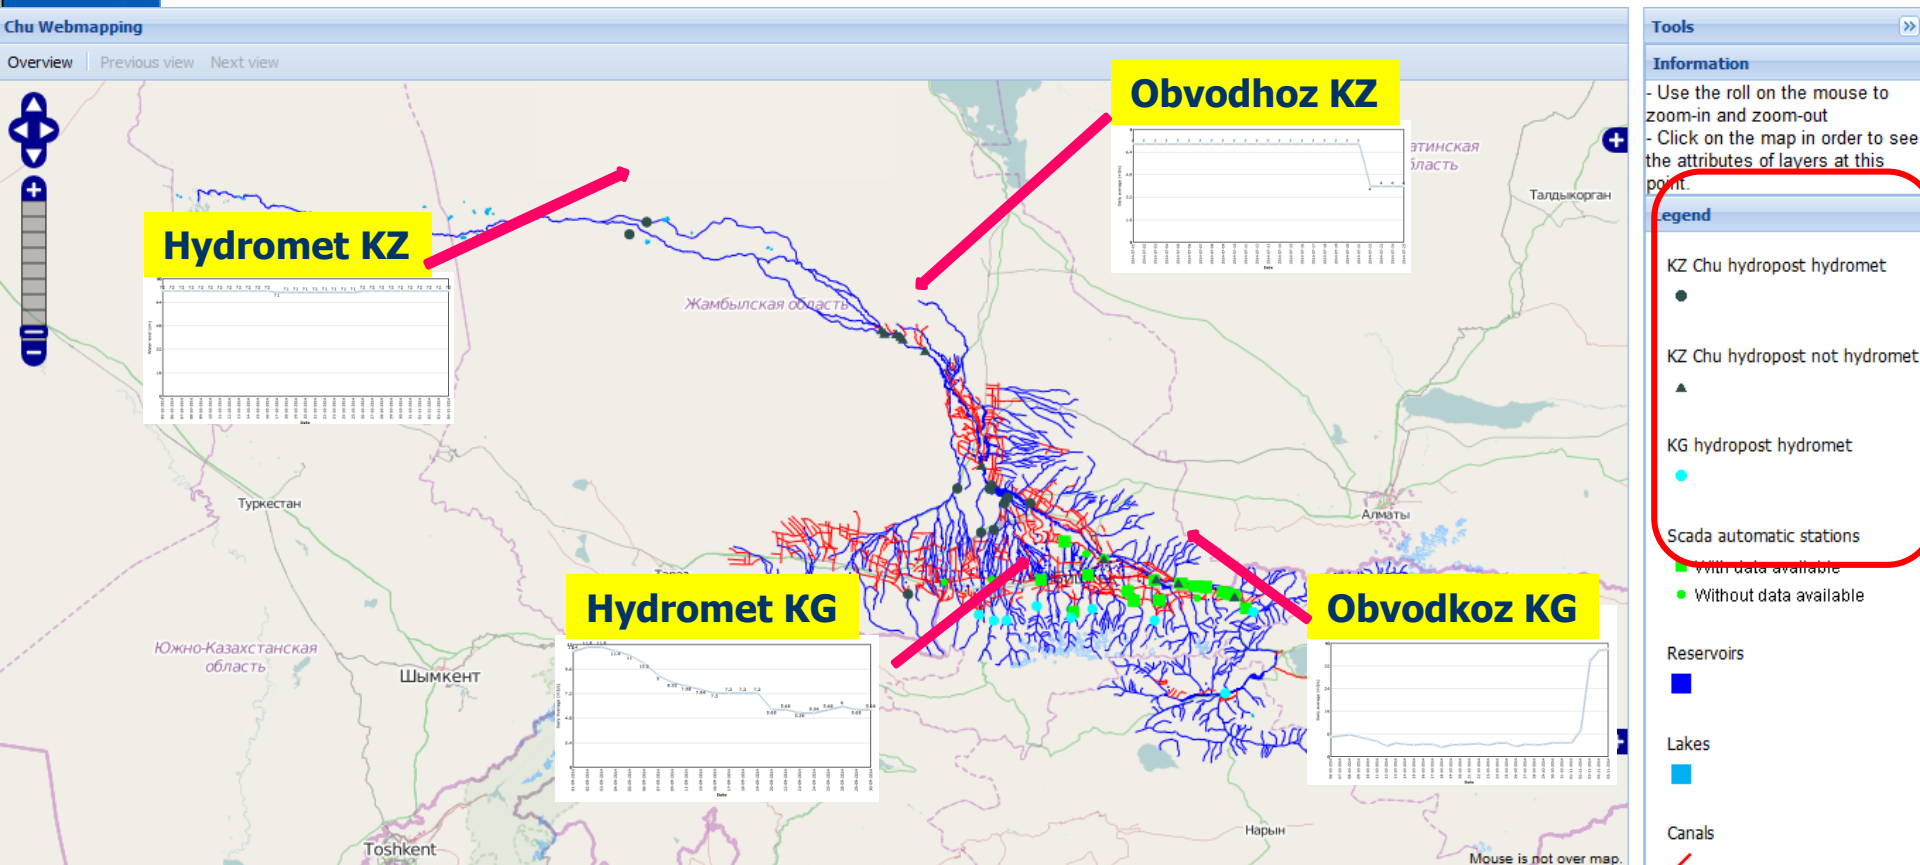

Common language
Common definitions/ codes/limits(GIS)/procedures for data exchange, ...

Example of the SDC/IMoMo project

Through a transboundary basin network of partners sharing data

- The Chu basin web mapping application prototype: a common tool for visualization of water resource situation, regularly actualized by the partners at transboundary level

Main lesson learned

- **Long term and regular data exchanges at transboundary level** are facilitated when the transboundary water **agreements** include objectives, procedures and rules related to data exchanges

- With political will of cooperation, they can be developed among others in:
 - **Identifying outputs of common interest** (need analysis, research of win/win solution, ...)
 - Analyzing /taking into account the existing situation
 - Thinking in terms of **interconnected shared information systems** managed by ad hoc actors/institutions (not centralized)
 - **Building on (reinforcing) national and partners information systems** and respecting/reinforcing the role of the data producers
 - Developing **common language** and common procedures
 - Reinforcing **human resources capacities** in term of data management and valorization
